

Proposed Patent Continuation Application

Patent Number 10,756,248 Date Filed May 2, 2016

Date of Patent August 25, 2020

Continuation Application Serial Number 17/001,544 Date Filed August 24, 2020

large increase in electrical power output using a shorted wave form Switching Power output with magnetic inductor.

### **Abstract**

A method of a large increasing electrical power output using a shorted wave form Switching Power output with magnetic inductor concentrating electrical power around a step up transformer secondary windings. The shorted wave form PWM can be used on any electrical energy source of solar, energy harvesting circuit, energy saving circuits, Thermoelectric body heat harvesters for monitoring body function in real time. Environmental monitors for weather, earth quake sensors and bridge
